

Current Perspectives in the Management of Thyroid Eye Disease: EAST MEETS WEST

Thyroid Eye Disease (TED) is a debilitating disease which is often challenging to manage. The program will comprise of a pre-congress course, hands-on cadaveric dissection, followed by the main ITED congress. The pre-congress teaching course will provide solid grounding into the diagnosis, investigation and treatment of TED. Participants will have hands-on practice under the guidance of international experts during the cadaveric dissection course. The main congress will be an exciting platform for international experts to share the latest breakthroughs in all aspects of TED. There will be ample opportunity for delegates to discuss clinical problems with leading experts and interact with colleagues from around the world.

Cadaveric Dissection Course

20 Feb 2019

ITEDS Symposium Main Meeting

22-23 Feb 2019
